

Simply protected

# EMiZON

Seriously secure

## Higher Security Today and Tomorrow

Global 21 is the [advanced signalling service](#) that combines enhanced premises protection by ensuring that the alarm always gets through.

Designed for today's digital communications Global 21 replaces the conventional telephone line between your alarm system, and monitoring centre and replaces it with [two connections](#). The first leverages your [existing broadband](#) internet connection; the second uses Optus' s latest [wireless technology](#).

This powerful combination makes Global 21 the secure and [cost-effective](#) signalling solution for [any security situation](#).

### Smarter and faster

Global 21 offers three key advantages over traditional alarm signalling services:

- It is guaranteed to work with next-generation broadband and fibre networks. This means that your alarm service will continue to run smoothly as these new networks are rolled-out across Australia.
- It allows your alarm provider to talk directly to your alarm panel. As a result, engineers can always interrogate your system, conduct routine service and run maintenance procedures - all from their offices. This means a fast response to service issues, fewer call-outs, and no inconvenience.
- Because your broadband connection is constantly monitored you get to know if there is any disruption to your business critical communications.

# Take a closer look

- **More reliable**

Uses your existing broadband connection for an 'always-on' link between your alarm system and monitoring centre.

- **More secure**

Alarms always get through. Global 21 sends a 'confirmed' activation using either broadband or wireless links.

- **More affordable**

Charges cover all communications - and no more dedicated line rentals or 1345xxxx phone calls to pay!

- **Fully approved**

Meets the exacting requirements of the insurance companies, police services, and available to comply with all Classes of the new Australian security standard: AS2201.5:2008.

- **Easy to deploy, cost-effective to manage**

Global 21 fits seamlessly into modern alarm panels. Enables your alarm company to manage and maintain your system without unnecessary call-outs and charges.

- **Future-proof**

Designed for the internet, and unlike many of its rivals is fully compatible with fibre and Voice over Internet Protocol (VoIP).

- **Flexible**

Works with any standard broadband service.

## Easy installation

Global 21 is simple to install as part of any existing or new alarm system.

It shares your office broadband connection, so you do not need to rent a dedicated line. In addition, you benefit from extra security because broadband connections are constantly monitored.
